

editorship of the *Geobulletin*, and was once more elected to Council. He is currently Director of the Centenary Geocongress of the Society, which will take place in 1995. He is also a keen genealogist, and has undertaken much research in this field.

Frank married Lieselotte Günther in 1952. They have three children, the youngest of whom is Chief Geologist at Lonrho's Western Platinum Mine, thus maintaining his father's interest in the PGM and the Bushveld Complex.

ACKNOWLEDGEMENTS

IN undertaking research of this nature, one calls on the very wide and varied experience of the past. I recall, with sincere appreciation, those who stood by me and provided encouragement for my considerable interest, spanning almost 50 years, in the Bushveld Complex generally and worldwide PGM deposits in particular. The individuals I would like to acknowledge in particular from the early years are my JCI colleagues Cedric Cousins and Gerrit Feringa, both of whom have since passed on to happier prospecting grounds. Also from this earlier period, I must thank Ray Key, President of Johnson Matthey in New York, Vim Makin of Matthey Bishop in Malvern USA, and Hatton Yoder of the Carnegie Institution in Washington for respectively introducing me to the intricacies of marketing of the precious metals, their varied industrial uses, and the state of physical and chemical experimentation on the PGM at that stage (1968).

I also fondly remember the many enjoyable field trips to the Bushveld and other complexes that I shared with such friends and colleagues as Louis Cabri, Eugene Cameron, Grant Cawthorn, Louis Coetzee, John Ferguson, Harro Fesq, Steve Gain, Duff Gold, Norman Harte, Dick Hutchinson, Don Hunter, Neil Irvine, Everett (Dale) Jackson, Bill Kelly, Reid Keys, Chris Lee, Bob Mann, Craig McKenzie, Tom Molyneaux, Tony Naldrett, Norman Page, Heikki Papunen, Martin Sharpe, Tim Shaw, Brian Skinner, Eugen Stumpfl, Tom Thayer, Gene Ulmer, Johan de Villiers, Morris Viljoen, Richard Viljoen, Gerhard von Gruenewald, Johannes Willemse, and Ben Worst, to mention but a few. These visits also included many platinum deposits overseas, encompassing the most important ones like Stillwater, Duluth, Sudbury, and Lac des Isles in North America, various South American deposits, and the exciting new Finnish deposits.

I also acknowledge the co-operation of the many JCI friends and colleagues who worked with me, or under my direction, on the Bushveld Complex or at the platinum mines, particularly also for their lively interest, enthusiasm, and encouragement in my work, spanning my 32 years with the JCI Group of companies.

During the compilation of this book, it was vital to consult as many sources of information as possible. Apart from acknowledging all the source material listed in the references, I must make special mention of friends and colleagues like John Barclay, Steve Gain, John Handley, Gerry Levin, Nick Stravakis, Morris Viljoen, Alan Wilson, Ben Worst, and many others, who either placed their considerable databases at my disposal, or provided vital published or unpublished information for my use. Considerable help, information, and advice was provided to me by the staff of the Minerals Bureau, and particularly Mr Shaun Barry, who gave his unstinting assistance. I must also mention, with very deep appreciation, the considerable and comprehensive information supplied by friends and colleagues in Germany and Europe.

I also wish to thank the various librarians for their consideration and patience in providing important scientific or commercial papers, books, magazines, and newspaper information — these include the staff of the libraries at the Minerals Bureau, Mintek, the Geological Survey, the University of Pretoria (Merensky library) and the CSIR, as well as the State Library and various libraries at the University of the Witwatersrand.

Special words of thanks must go to Mr Peter Emmel of the local Johnson Matthey company for providing me with past and current copies of the excellent annual reviews regarding the PGM, as well as to Mr Chris Davies of Lonrho, who also kindly supplied me with important data on their platinum mines.

Grateful words of appreciation go to my sons, Gunther and Anthony, for their considerable help during this compilation. It was, in fact, my youngest geologist son Anthony who initially brought the need for this book to my attention, as many of his colleagues who were intimately involved in the daily production of the PGM had virtually no idea of the eventual uses of those metals in industry, fabrication, or commerce. Anthony also undertook the computerization and printing of all the statistical and geological diagrams used in the text. My sincere thanks also to Western Platinum Mines for the use of their mainframe computer for preparing the diagrams. My eldest son Gunther gave frequent and often urgently-required advice and help when I experienced problems with my personal computer and printer, and in the preparation of the floppy disks.

Many persons and institutions deserve thanks for the use of their transparencies that were used to produce the colour illustrations used in the text. Especially helpful were Gold Fields of South Africa (Dr Richard Viljoen),
